CERTIFICATION OF SEPTIC TANKS
APRIL 2, 1997

The Texas Commission on Environmental Quality (“TCEQ”) f/k/a Texas Natural Resource Commission adopted Chapter 285 for On-Site Sewage Treatment Facilities to be effective February 2, 1997. One of the provisions of Chapter 285 states that all concrete septic tanks must conform to Sections Five and Six of ASTM C-1227-93a. Tank manufacturers were given 90 days after February 2, 1997 to have their tanks certified as conforming to those rules.

As of April 1, 1997, Hill Country Concrete Products, Inc. is pleased to certify that our tank design and our manufacturing processes have been evaluated by a registered professional engineer licensed to practice in the State of Texas and have been confirmed to be designed and manufactured in accordance with Sections Five and Six of ASTM C-1227-93a.

Quality you can build on since 1978
