IMPORTANT NOTICE REGARDING WATER TESTING TANKS

When filling interceptors or tanks for water testing:

DO NOT FILL MORE THAN TWO INCHES INTO AN 8 INCH THICK TRAFFIC LID NOR MORE THAN ONE HALF INCH INTO A NON-TRAFFIC LID.

The hydraulic uplift on the lid can result in leakage of the gasket between the lid and the tank.

Liquid depths greater than this can result in excess pressure on the walls of the tank and cause damage to the tank and will void Hill Country Concrete Products, Inc.'s express limited warranty printed at the front of this catalog and on the reverse of our invoice.

This condition can result any time the plumbing outlet is plugged during the water test.

All tanks are designed to withstand normal pressures at standard operating liquid depths.

This warning applies to ALL tanks, wether low profile or heavy duty.

Quality you can build on since 1978
